

Axess RESORT.CHARGE

**Convenient
and cashless
payment**

Axess RESORT.CHARGE turns the chip card into a digital wallet. Your guests can use it for convenient and secure payments in the ski area. It also eliminates having to handle change and exchange rates. Your guests always carry their credit balance on them with the ski ticket.

This smart payment option in the ski area is set up by simply opening an account and depositing the credit balance at the ticket office or providing a credit card in the customer account. The deposited amount is booked onto the respective account in the central Axess DATACENTER – if the chip card is lost, it can be blocked to prevent financial loss. The account can optionally be protected with a PIN code. RESORT.CHARGE is also ideal for issuing gift cards.

Partner service providers and outside systems can be integrated securely through an interface or application. The personal account can be expanded to include additional members (e.g. family members, friends, etc.) at any time and can also be used to pay in the online shop.

Axess RESORT.CHARGE

Features

- › Convenient cashless payment
- › Joint account can be used by multiple (family) members
- › Payment interface available for partner companies and outside systems
- › Charge at point of sale
- › PIN query before payment
- › Individual rules for usage behavior can be defined (e.g. daily limits per card)
- › Issuing of gift cards
- › The cash value is stored centrally in the customer account of the **DATACENTER**, not on the ticket
- › Encrypted communication with the **DATACENTER** for secure payment processing
